I'm excited to be applying for a Software Developer position and or Information Technology-related position at your company. With software development, there is always something new to discover. Designing a computer program that is helpful to the user is my ultimate goal for every project. I'm delighted by the opportunity to apply my knowledge at a well-known provider of software services.

During my previous role at Hydee, I provided support as a junior front-end developer for their mobile application which was an augmented reality-based technology allowing users to interact with each other through a 3 dimensional messaging system. This system was intended to be utilized by general public as a social media platform. As part of my duties, I provided front-end readable codes written in native mobile programming language, Kotlin and also provided possible solutions to unexpected problems.

In my background, I've always been fascinated by technology and computers. This made me follow this career path and with discipline I managed to share my skills while working with great minds in person and remote. I learned time management and acquired self-control attitude through working with other software developers which increased my confidence to share my skills to other entity that I anticipate to work with.

Thank you for your time and consideration. I'm looking forward to learning more about software development and about the fundamental values about your company. As a Software Developer, my target is to continually enhance my programming skills in order to present better solutions to employers and their clients. I enjoy uncovering new ideas and hope to use such talent to advance your company's mission to deliver viable solutions in the tech-industry.

Sincerely,

Didier Nsengiyumva
